A cantilever pipe (15) of the outrigger arrangement (5) with several sections (7) can be moved over a set working area of field (1). The horizontal swing of the outrigger arrangement is controlled by the unit (23), so that the movement of separate sections is carried out in accordance with the movement of the preceding section relative to the base (8), the adjusting drive being provided by the hydraulic cylinders (11).

Documents 8

In an Office Action in a corresponding German patent application, Document 8 was cited as mere state of the art or technical background in relevance. Applicants are not aware of any English language document equivalent to Document 8, other than an English language abstract:

The mobile concrete pumping unit is carried on an articulated arm which can position the delivery tip at the required location and maintain the position within predetermined limits by means of a hydraulic control circuit. The vehicle (11) carrying the concrete pump (12) conveys the delivery tube (16) along a jointed arm consisting of at least three segments which can be extended so that the final section (27) positions the delivery tube end section (43) in the desired place for delivery of the liquid concrete (18). The final section of the arm is accurately positioned with respect to the base (66) and stabilised by means of a control system (67) to prevent undue swinging of the delivery tube.
